

License Bank: Track and protect your FCC spectrum assets

- Developed for organizations with multiple radio licenses who have numerous facilities throughout the United States where staff members need access to license information.
- All your licenses and FRNs secured under one EWA account;
 - All your company's licenses are viewable under one platform, even if they are associated under different FRNs.
 - See at a glance if your FRNs are active. If an FRN shows "error", that is usually a clear indicator that someone has changed the password.
- Password-protected logins for each of your employees; avoids disclosing your FCC credentials;
 - Safeguard licenses against unapproved/accidental changes, even cancellations.
 - No more having to change your FRN password when a staff member leaves your employ.
 - Company Admin has control over which staff members are given access to the License Bank software, including the level of access.
- Easily find and produce Official Copies of your licenses.
 - License Bank presents all your license data which the user can filter in a variety of ways to find the license they need.
 - Licensee name, radio service code, transmitter city, state and address, transmitter type, frequencies, effective date, FRN, and call sign.
- Search results can be exported to a CSV file that can be opened in a spreadsheet of your choice and sorted however best suits your needs.
